

Whole House Carbon Filtration System

Combining a filtration system with your water softener is the easiest, most convenient way to further improve the taste, smell, clarity and overall quality of your water.

Carbon Filtration 9x48 or 8x44

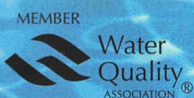

- Reduces tastes & odors
- Better tasting coffee, teas, soups & ice
- Showers and baths free of chlorine
- Reduced wear and tear on all water using appliances
- Better water for washing clothes and bathing
- Solid fiberglass construction with food grade epoxy lining
- Rugged durability, stands up to heavy use year after year

During normal Filtration, untreated water enters the system through an inlet at the top of the media tank. As the water flows down through the filtering bed, foreign particles, unpleasant odors and taste are trapped and absorbed, producing treated water as it flows up riser into softener, which prolongs resin life.
